- 1 Turn on the Polaroid Now+ camera by pressing the ON | OFF button.

- 2 To insert the film pack, open the film door.

- 3 Insert the film pack darkslide up and with the tab facing toward you.

- 4 Close the film door. The darkslide covered by the film shield will eject.

- 5 Do not pull on the film shield. Allow it to roll back into the camera, so you can remove the darkslide. You're now ready to take your first photo.

- 6 To add a colored filter from the included kit, press it over the lens. For the starburst and red vignette filters, turn until the small notch aligns with the light meter at the bottom of the lens. The filter will then click into place.

- 7 Download the Polaroid app for extra creative options. Follow the instructions on your mobile phone. The +Button on the camera will turn blue when a connection has been established*.

- 8 When using the Polaroid app, select your mode before continuing to step 9.

- 9 Aim the camera at your subject and press the shutter button. The flash will trigger automatically.

- 10 To shoot without the flash, press the flash button before each shot.

- 11 The photo covered by the film shield will eject.

- 12 Don't shake the photo! Place it in a dark place or face down on a flat surface. Follow the development time on the packaging.
